

# Michael Braverman

DevOps/AI Engineer

✉ [mbraverman96@gmail.com](mailto:mbraverman96@gmail.com) 📍 Dubai, UAE 🌐 <https://github.com/mbrav> 📞

---

## Summary

DevOps / SRE & AI Systems Engineer building reliable infrastructure, developer tooling, Kubernetes platforms, and self-hosted LLM systems. Fluent in Python, Go, and Rust; focused on automation, observability, performance, and practical business impact.

## Profiles

|                          |                        |                          |
|--------------------------|------------------------|--------------------------|
| <a href="#">LinkedIn</a> | <a href="#">Github</a> | <a href="#">Telegram</a> |
| <a href="#">LinkedIn</a> | <a href="#">Github</a> | <a href="#">Telegram</a> |

## Experience

|                              |                   |
|------------------------------|-------------------|
| International HFT Hedge-Fund | 2023-10 – Present |
| DevOps/AI Engineer           |                   |

- Automated AWS and cloud infrastructure with Terraform and Pulumi to improve scalability, reduce manual work, and speed up delivery.
- Built and maintained Kubernetes platforms across bare-metal and cloud using Kubespray, Talos Linux, GitLab CI, and Argo CD.
- Implemented observability for cloud VMs, Kubernetes workloads, bare-metal servers, and network hardware using CloudWatch, Prometheus, Grafana, Zabbix, VictoriaMetrics, and ELK.
- Supported distributed tracing, profiling, and performance analysis with Grafana Alloy, Tempo, and Pyroscope.
- Supported latency-sensitive trading systems during on-call rotations while maintaining sub-30-minute response times.
- Built Python, Go, and AWS Lambda tooling to automate CloudWatch and Cost Explorer reporting through Slack.
- Developed AI-driven pipelines for confidential data using self-hosted open-weight LLMs while preserving privacy and data control.
- Administered and tuned self-hosted llama.cpp servers to improve reliability and performance of internal LLM services.
- Built agentic and RAG workflows with LangGraph, LangChain, and Langfuse, including evaluation, tracing, and observability.
- Developed multi-modal PostgreSQL search using BM25, vector search, and graph-based retrieval for internal datasets.
- Built production-oriented AI components in Python, Rust, and Go using LangGraph, rig, and eino.
- Created DevSecOps tools to monitor user accounts across LDAP and authentication systems, streamlining access reviews.
- Provided infrastructure and CI/CD support for C++ build systems to ensure reliable, repeatable builds.

|                 |                   |
|-----------------|-------------------|
| CentrInform     | 2022-11 – 2023-10 |
| DevOps Engineer |                   |

- Oversaw the operation and deployment lifecycle of more than 40 Java/Go microservices handling 2–12k RPS, while ensuring high availability and consistent performance within a Kubernetes environment.
- Ensured 99.99% SLA uptime by managing SRE on-call responsibilities and utilizing tools such as Zabbix, Grafana and Prometheus for monitoring and issue diagnostics;
- Managed an on-premise infrastructure consisting of ~100 virtual machines and 20 bare-metal servers, deploying technologies including GitLab CI, Kubernetes, Minio, Consul, Vault, ELK, HAProxy, Patroni, PostgreSQL, and ClickHouse;
- Implemented IaC and CI/CD pipelines, contributing to the migration to GitLab CI + Argo CD while automating infrastructure management with Terraform and Ansible;

- Led a comprehensive infrastructure overhaul, rebuilding it using Terraform, Ansible, Consul, and Vault, significantly improving scalability, security, and efficiency;
- Created an infrastructure diagram generator using Ansible:  
[github.com/mbrav/ansible-inventory-diagram](https://github.com/mbrav/ansible-inventory-diagram).
- Developed custom Rust-based tools to automate workflows:  
[github.com/mbrav/gitraider](https://github.com/mbrav/gitraider).

|                          |                   |
|--------------------------|-------------------|
| Banks Soft Systems (BSS) | 2022-04 – 2022-11 |
| Release Engineer         |                   |

- Reduced release build and testing pipeline times by over 3X, significantly improving development efficiency;
- Integrated automated processes for building and testing Docker containers with varying NLP models and Linux distribution configurations (RHEL, CentOS, RedHat, Ubuntu, Rocky) using Bash, Python, Ansible, and GitHub Actions;
- Managed CVE alerts and addressed security vulnerabilities in Docker images by leveraging security scanning tools to ensure compliance with regulatory requirements for banking software;
- Conducted code reviews for an AI voice assistant project, ensuring adherence to best practices, code quality, and functionality.

Genesis Block 2021-11 – 2022-03

Python and Blockchain Developer

- Designed and developed APIs using Flask and FastAPI frameworks in Python, adhering to best software development practices while collaborating with a small team of 5 members;
- Maintained and supported projects integrating smart contracts and other innovative blockchain solutions, ensuring stability and performance;
- Worked closely with development teams and international clients to ensure precise understanding and successful implementation of project requirements.
